ABOUT US

Dasso, founded in 1993, is one of the global leader and innovator of the bamboo industry. After decades of development, dasso now have 8 manufacturing facilities and over 1000 employees.

Established in 2013, dasso's "Bamboo+" brand has collaborated with numerous renowned domestic and international designers and artists since its inception, leveraging Dasso's independently developed bamboo-based materials and bamboo processing technologies to create home furnishing products and creative spaces that resonate with modern living. It showcases a low-carbon and sustainable lifestyle through the lens of bamboo.

ABAMBOO™

Flattened bamboo technology

Abamboo (Invention patent: 200710164316.4) is a manufacturing technique flattening bamboo culms without cracking. This technique not only enhances the output of the material itself, but also reduces the usage of glue, which makes it safer and greener to produce cutting boards, flooring, furniture, tableware and other products. Meanwhile, Abamboo is hard, durable and unlikely to crack.

Environmentally Friendly and Healthy

Bamboo sheets significantly reduce the use of glue and have extremely low formaldehyde content, meeting the highest environmental protection standard of ENF level.

Stable and Durable Performance

The entire bamboo structure retains the continuity of bamboo fibers, is not easily deformed, warped, or cracked, and is suitable for complex environments such as underfloor heating.

The texture is complete and coherent, without any sense of splicing or fragmentation. The board surface is flat and high-end, suitable for various design styles. The utilization rate of bamboo has increased from 30% -40% to over 70%, with higher cost-effectiveness. Strong processability, easy to achieve creative customization such as carving and hollowing out.

SUNSET

ZP-SUNSET-001

natural color

On the basis of ordinary bamboo, by using ABAMBOO™ flattened technology, the bamboo green layer is retained 100% without damaging the continuity of bamboo fibers, achieving large-scale, seamless whole board forming. It is an innovative building material that combines natural texture, performance advantages, and Eastern aesthetics.

Unfold bamboo decorative panels

Made from natural bamboo, the vertical arrangement technique showcases a unique texture. The backside is covered with high-density mesh fabric to reinforce the board's structure, enhancing stability and flexibility while preventing cracking and deformation. It is also easy to cut and install, suitable for various applications such as wall decoration, ceiling panels, and furniture finishes.

BAMBOO PANELS

BAMBOO PANELS

Elegant / Durable / Natural

BAMBOO PANELS

For the first time, bamboo was processed into solid panels through industrial process. The hollow bamboo stem would be cut into strips, then pressed in horizontal or vertical traditional structure. Their applications were made for flooring, walls, kitchen tops, ceilings, and other interior decoration elements.

Bamboo Acoustic Boards

The dasso Bamboo Acoustic Boards are compressed into distinct structures and shapes. These boards are designed to detect different frequencies of acoustic-like reflection, limit reverberation, and channel out general noise; making them an excellent solution for high-grade surround sound. They can be installed in venues that require any type of sound to travel, and resonate in the most immaculate way, such as; auditoriums, theatres, conference rooms, studios etc.
